CERTIFICATION OVERVIEW

Pursuant to the Canadian Environmental Protection Act, Environment Canada (equivalent to US-EPA) established guidelines on **thermal insulation materials** under the auspices of **Environmental Choice™ Program (ECP)**. This program is designed to support manufacturers in the continuing effort to improve and/or maintain environmental quality by reducing energy, materials consumption, and minimizing the impacts of pollution generated by production, use and disposal. This is achieved through the establishment and promotion of higher standards of environmental performance against which products can be certified and consequently display Environment Canada's official mark of certification – the **EcoLogo™**.

The **ECP** receives advice from a broad range of experts in a variety of fields including science, environmental advocacy, consumer issues, manufacturing, retailing, and economics. Since August 1995, TerraChoice Environmental Services Inc., a private company, has been licensed by Environment Canada to operationally manage and deliver the Program. In this capacity, TerraChoice is responsible for certifying appropriate products and manufacturers against the established guidelines for such products and services.

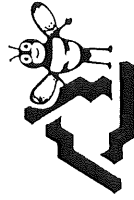

SELECTION™ 500 Certification Criteria

Sealection™ 500 has been certified because it is made and applied in a way that improves energy efficiency, contains no toxic by-products and is a more environmentally responsible insulation product. At the same time, **Sealection™ 500** meets all applicable and relevant safety and performance standards for insulation in new residential construction. TerraChoice officials verified **Sealection™ 500** on the established guidelines based on its **LIFE-CYCLE**:

- Environmental benefits that occur at the following stages:
 - Raw Materials
 - Product Use
- Specific environmental impact areas:
 - Energy consumption
 - Noise
- Environmental benefits that occur at the following stages:
 - Product Manufacture
 - Product Disposal
- Air pollution
- Human health

Based on the above Life Cycle review, **SELECTION™ 500**
is certified by **Environmental Choice™ Program**
as an environmentally responsible material.
